

Deer Management & Habitat Assessment

Wildlife Specialists, LLC

Wildlife Specialists, LLC, offers full spectrum custom deer management services designed to meet the specific project goals of our clients from individual landowners to entire communities. We help select and conduct the appropriate surveys, generate GIS maps, hold public meetings, design habitat enhancements, assess management options, and develop site-specific plans. All of our recommendations are based on the principles of Quality Deer Management.

Deer management services include:

- Aerial Surveys using daytime or infrared technologies
- Baited Camera Surveys
- Distance Sampling (Spotlight or Daylight)
- Pellet Group Surveys
- Browsing and Habitat Surveys
- Deer Condition Assessment from Check Stations
- Deer Aging
- Public Meetings and Human Dimensions Research

Wildlife Specialists, LLC, has formed a sister corporation, [Micro Flight Aerial Resource Monitoring](#), to handle FLIR and other aerial photography needs using unmanned aircraft. Check it out at www.microflightarm.com.

Our experts have coordinated some of the largest-scale surveys in the history of deer and habitat management.

Specifically, we have designed and implemented aerial FLIR surveys and habitat browsing surveys. To date, our experts have developed the protocols considered state-of-the-art in deer density estimation by the pellet group technique and in habitat browsing and regeneration surveys. In addition, we have coauthored numerous reports and publications on deer management.
