

Timber Rattlesnake Surveys

Wildlife Specialists, LLC

Wildlife Specialists, LLC, has extensive experience with timber rattlesnake surveys and handling. Our staff are qualified to provide a wide variety of services related to rattlesnake management.

Habitat Assessments: Our staff are certified to identify sites within project areas that are likely to support timber rattlesnakes. These areas are often associated with rocky outcrops, talus slopes, and boulder fields.

Presence/Absence Surveys: Once timber rattlesnake habitat is located, our staff are qualified to survey the area for the presence of rattlesnake populations. If rattlesnakes are found, we assess the area to determine if it is being used for basking, foraging, denning, or reproduction.

Construction Monitoring: Our staff are available to monitor active construction sites to minimize impact on local timber rattlesnake populations. If rattlesnakes are found during construction, we are qualified to handle and move them to a safer location.

Comprehensive Reporting: Our reports contain all necessary information required by the regulatory agencies to evaluate a project. Specifically, we provide detailed site descriptions, high quality maps, photographs, and all data collected at each site.

Providing Services for:

- Wind Energy Development
- Utility Rights of Way
- Oil & Gas Well Sites and Pipelines
- Coal Mining
- Transportation
- Private Landowners
- Land Development Projects
